### **PRISM MICROSYSTEMS APPOINTS 360 VISIBILITY AS RESELLER FOR CANADA**

*Appointment Underscores Robust Appeal Of EventTracker In Canada*

**COLUMBIA, MD, December 11, 2006**—Prism Microsystems, a leading systems management solutions provider announced today the appointment of 360 Visibility, a leading Canadian systems integrator to sell Prism's EventTracker in the Canadian market place. This appointment puts EventTracker expertise closer to the Canadian market so that customers have full confidence that they will get the support they need.

EventTracker provides logging in depth to monitor security related events from a central console, maintain continuous compliance with government regulations and achieve significant cost savings through efficient use of IT staff. Robust sales in Canada show that EventTracker addresses issues that are common to data centers everywhere. This appointment gives Canadian customers the ability to leverage existing relationships with established resellers. Minimizing the number of procurement relationships and having local accountability is often a goal for buyers.

"We are pleased to partner with 360 Visibility," said A. N. Ananth, President of Prism Microsystems. "We are happy to bring the benefits of Event Tracker to their customer base in Canada."

"We are very happy to offer EventTracker to our customers in Canada," said Marco D'Ercole, Executive Vice President of 360 Visibility. "When we found EventTracker we were really excited. We'd been searching for a solution that would help one of our clients monitor their 30 servers across Canada. They were spending a minimum of four hours a day checking up on servers; and now with EventTracker they have reduced that time to 30 minutes a day. They're able to see clearly and act faster! EventTracker fills an important demand from our customers who are looking for an easy to deploy and maintain system that enables them to monitor security related events, keep in compliance with mandatory government regulations and achieve significant cost savings through efficient use of IT staff."

### **About Prism Microsystems**
